Project Brief

The purpose of this project is to **eliminate the problems with multiple login credentials on different social media platforms**, that a user faces because of multiple platforms having different patterns for these credentials.

As we progress through this project, we will first understand the actual problem that exists with these credentials and eventually will **lead you towards a strategic solution** that could be the future of how we interact with devices in our day to day life.

What is Identity?

The distinguishing character or personality of an individual.

For this project, identity means the **different accounts** that people make **on different online social media platforms** also known as **Digital Identity**.

Need for Identity Management

Ensure Regulatory compliance

Enable cost savings

Reduce Catfishing
Frauds by fake online accounts

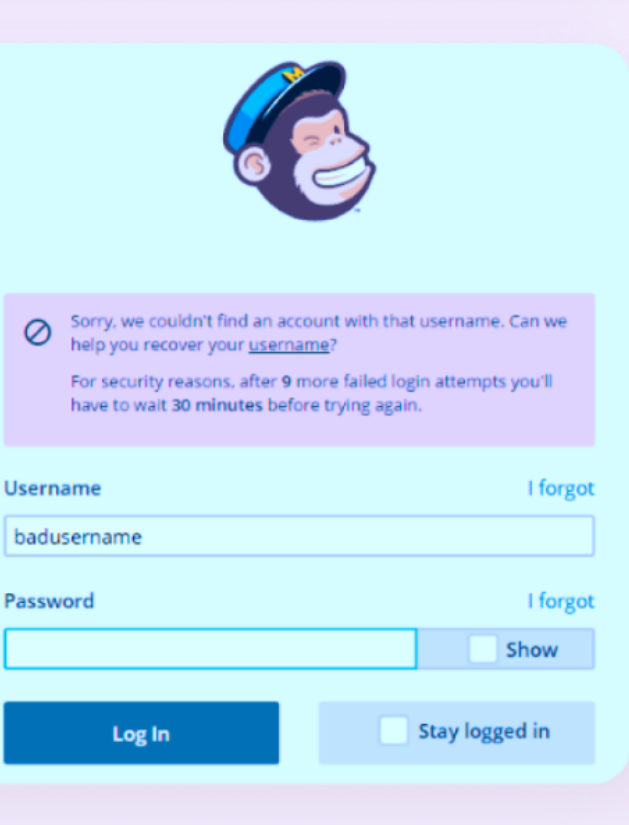
Simplify the lives of the users:
By solving the problem of Remembering Login Credentials

Problem Statement

Different **social media platforms require its own unique account** (identity). Working with multiple login credentials is a **problem for users**.

Using the same login credentials is not an option as:

- Each platform has its own set of rules for passwords
- Using the same credentials everywhere is not safe



Sorry, we couldn't find an account with that username. Can we help you recover your username?

For security reasons, after 9 more failed login attempts you'll have to wait 30 minutes before trying again.

Case Study

Forgetting Login credentials on Social Media

Case Study 1

A detailed **analysis** of a major e-commerce site, **Amazon India**, found:

45%	1,60,000	75%
of all customers had multiple registrations	people requested their password every day	of people never completed their purchase, once they requested their password.

Case Study 2

A detailed **analysis** of a major Cyber Security Company, **KasperSky India**, found:

80%	61%	44%
of **data breaches** are traced to **weak or reused** login credentials	of people **use the same password** for multiple online accounts	of users **change** their account passwords **only once per year**

Target Audience

Age Group
50 & above

CHANDIGARH

Who use multiple social media accounts and have difficulty remembering login credentials.

Strategy

User Journey

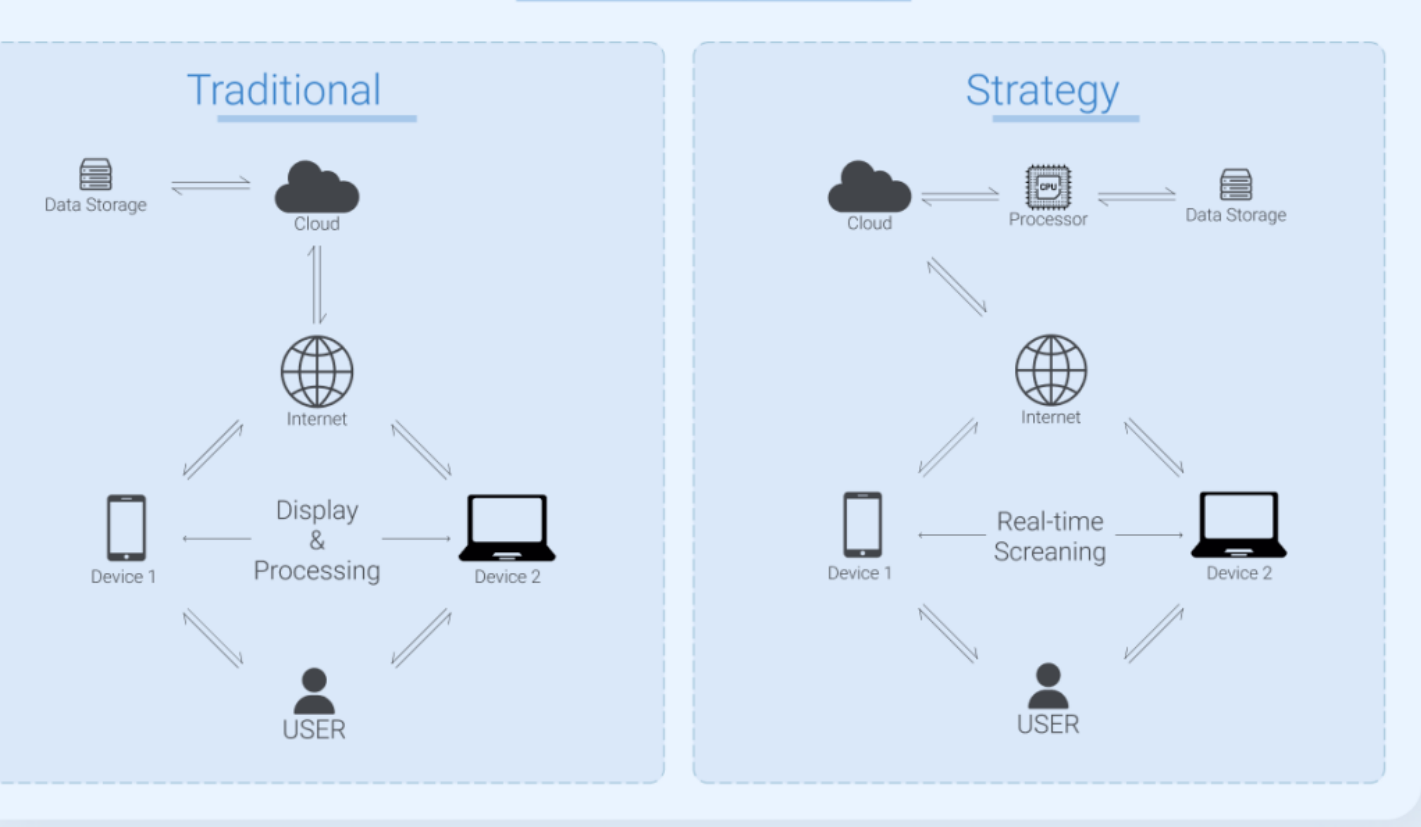
Traditional	Strategic
Turn on Device (Your Device)	Turn on Device (Any)
Login to device (Password/Pin/Biometrics)	Login to device (Biometrics) Authenticate if not your device
Open App/Website of Social Media Platform	Open App/Website of Social Media Platform
Login/Sign Up using Platform Loging credentials	~~Login/Sign Up using Platform Loging credentials~~
Use Platform	Use Platform

Identity

To improve the experience of the users, we are **creating a Identity linked to all your social media accounts** registered under a **Central Digital Registry** that has the following **features**:

- Single
- Unique
- Universal
- Cloud Based
- Digital
- Omnipresent

Cloud Computing



Traditional
Data Storage
Cloud
Internet
Device 1
Display & Processing
Device 2
USER
Strategy

USER

Privacy of Identities

- Cloud Storage with Encrypted Credentials
- The data, even if hacked, would be useless as it cannot be understood without being decrypted

Security of Identities

- Biometric Authentication
- Aadhar Card KYC for registration

Transactions of Identities

- IP Address & Device Location tracking
- Seamless switch between devices using pre-registered Aadhar Biometrics

Storage of Identities

- Cloud Storage
- Encrypted Data
- Country specific servers

Environment

When a user **logs in** to any of the mentioned device using his **identity**, everything gets adjusted according to the user's usage pattern.

Laptops
Smart TVs
Car Infotainment
Mobile Phones
Wearables
AR / VR / MR

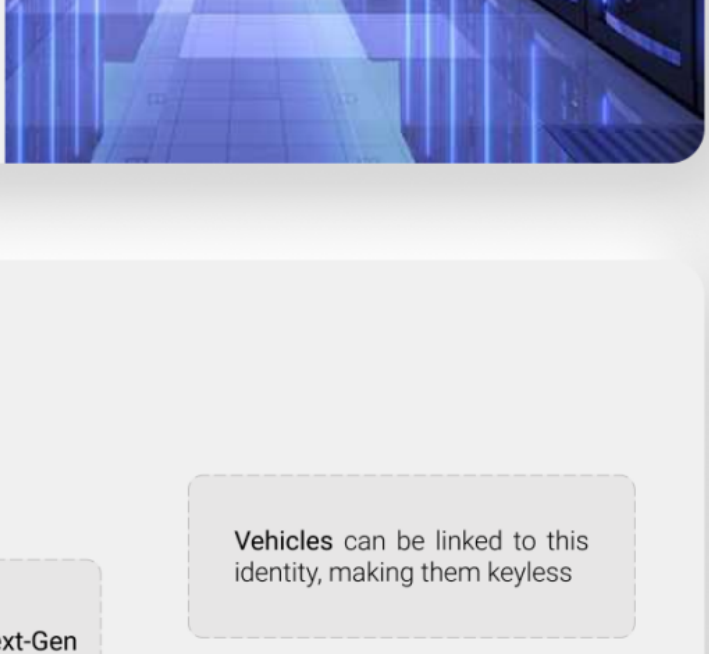
Limitations & Future Scope

Limitations

- Consistent and Low Latency Internet
- Cost to establish Data Centers/ Server Rooms
- Widespread Awareness & Adoption



Future Scope

Financial identities can be **integrated** with extra layers of security

Improvement of Security and Transaction through **Block Chains**

Ready for Next-Gen Devices and Technologies

Vehicles can be linked to this identity, making them keyless

Internet of Things Devices **interconnection** through cloud

Thank You for Scrolling...
